Release 0.1

Audrey Roy

July 11, 2013

CONTENTS

1	What is Useful?	3
2	.	5
2.1	find_site_packages Module	5
2.2	generate_html_jinja2 Module	5
2.3	talk_timer Module	5
2.4	text_to_speech Module	5
2.5	wrap_text_file Module	5
3	Indices and tables	7
	Python Module Index	9

Contents:

WHAT IS USEFUL?

useful is my own personal Python learning playground.

It consists of:

- A bunch of example Python code snippets, often demonstrating use of PyPI packages.
- Sphinx's autodoc for ease of browsing.

Its purpose is:

- To provide myself with simple examples of common Python tasks.
- To show myself how various Python packages can be used, in an isolated manner.
- To be a personal learning playground where I can experiment with Python on my own and discover useful Python packages for my own use.

It is most definitely *not*:

- A portfolio (Don't judge the code, please!)
- A reusable module to be imported (that's why it's not on PyPI)
- A usage guide (Don't do what I do! You have been warned.)

■

2.1 find_site_packages Module

`find_site_packages.print_site_packages()`

Prints your main global site-packages directory, as well as all of your global ones.

2.2 generate_html_jinja2 Module

`generate_html_jinja2.generate_html()`

Takes an HTML template with Jinja2 blocks/filters as input. Writes out an HTML template.

2.3 talk_timer Module

2.4 text_to_speech Module

2.5 wrap_text_file Module

INDICES AND TABLES

- *genindex*
- *modindex*
- *search*

PYTHON MODULE INDEX

f

`find_site_packages`, 5

g

`generate_html_jinja2`, 5
